

## J57 / J157AB Refractometer Technical Bulletin

### J57AB /J157AB Refractometers for Measurement of Urea Concentration for Diesel Engine Additives

#### Standards

Designed in accordance with DIN 70071 / ISO 22241-2

#### Basic operation

The J57AB is a sub model of the J57HA and most details on the Technical Bulletin 941 apply; the J157AB is a sub model of the J157 and most details on Technical Bulletin 940 apply. The differences between the AB and the standard models are:

#### Temperature

Both instruments have improved temperature performance to better than 0.02°C, meeting the requirements of DIN 70071 / ISO 22241-2

#### Scale

The J57AB displays results in refractive index or % Urea. The J157AB allows a user to change the calculation of Urea by changing the f number or by entering the Biruret.

#### Optional Accessories

Both the J57AB and J157AB can export data to a USB stick or strip printer

The J157AB is fully networkable and can be connected to:

- Network Printer
- Autosampler
- Barcode Reader
